

Library Management Guide

Purpose & Context

This guide provides the required steps to install the WildXR application and lock, remove, and/or hide unwanted VR applications. Meta VR headsets automatically install numerous social media apps that may be undesirable in a public setting. Locking applications allows you to set a 4-16 digit PIN that is required to launch the applications. This lock persists if the application is somehow reinstalled.

⚠ **Meta:** Meta hardware and software (including MQDH) are outside WPS control. Meta updates may cause unexpected functionality changes in VR systems. WPS monitors Meta releases to inform users of potential impacts and changes.

Prerequisites

- A WiFi internet connection
- VR headsets

Quick Overview (for experienced users)

1. Install the WildXR application
2. Open the Library on the VR headset
3. Lock all undesired applications (*WPS recommends locking all undesired apps even if you plan to uninstall them*)
4. Uninstall undesired applications (*not possible for all applications*)
5. Hide undesired applications

Detailed Steps

Navigate to the Store

1. **Open the Store panel**
 - Power on the VR headset
 - Put on the VR headset
 - On the floating menu bar - click the **Store** icon (*an orange storefront icon*)
2. **Search for WildXR**
 - Click on the **"Search"** icon in the upper left (*a magnifying glass icon*)
 - Enter **"Wildxr"** on the virtual keyboard that appears (*select keys with the right or left hand controller*)
 - Click the **"Search"** key on the virtual keyboard to initiate the search

3. Install WildXR

- Under "**Apps & Games**" locate the WildXR tile.
- Click on the "**wildXR**" tile
- Click on the "**Get**" button on the lower right
- The Wildxr application should begin downloading and will install automatically.

Navigate to App Library

4. Open the Library panel

- On the floating menu bar - click the **Library** icon (*a 3x3 grid of dots*)

5. Skip automatic install

- A modal window may appear offering to automatically install apps from your library
- Select "**Skip**" for these automatic installations

Curate Visible Applications

6. Select unwanted applications

- Hover over each application tile
- Click on the "**Options**" button (*three dots in a row*)
- *Some applications will not offer "**Options**" button and cannot be removed or hidden*
- *If "**Unpin from Universal Menu**" is offered as an option we recommend selecting it*
- Click "**Lock**" - go to Step 7
- Click "**Uninstall**" - go to Step 8
- Click "**Hide**" - go to Step 9

7. Lock applications

- Choose "**Lock**"
- Enter a PIN to lock the application
- *Meta allows only one pin to be set for locking applications*
- Click "**Continue**"
- Re-enter the chosen Pin to ensure they match
- Click "**Continue**" to apply the lock

8. Uninstall applications

- Choose "**Uninstall**"
- Click the "**Uninstall**" button on the warning modal that appears
- The application tile will remain visible to users after being uninstalled
- Click the "**Options**" button again to hide the uninstalled application

9. Hide applications

- Choose "**Hide**:"
- *WPS does not recommend Hiding the "**Settings**" application - no functionality will be lost if it is hidden*
- Check the "**Don't show again**" box
- Click "**Hide**"

Make WildXR readily available

10. Pin WildXR to Universal Menu

- Hover over the WildXR tile
- Select the "**Options**" button
- Click "**Pin to Universal Menu**"

Troubleshooting

Unable to find WildXR application:

- Ensure that you are searching in the Store not the Library
- Verify the spelling of WildXR
- Check your connection to the internet

WildXR application fails to download:

- Verify your headset is connected to the internet
- Low bandwidth or unstable internet can influence the ability to download application

Cannot uninstall application:

- Only some applications can be uninstalled
- Choose to "**Hide**" the application instead - Step 9

Undesired applications already installed:

- Meta installs some applications by default without input from the user
- Try "**Uninstalling**" - Step 8 or "**Hiding**" - Step 9 the application
- Apply a "**Lock**" - Step 7 - regardless of whether you uninstall or hide an app
